

What is claimed is:

1. An apparatus for providing a reminder message to a display comprising:

a handheld device comprising an input device for entering a reminder message and a transmitter for wirelessly transmitting a signal corresponding to the reminder message, the reminder message comprising reminder information and a time that the reminder information is to be displayed to a user;

a memory device for storing reminder messages;

a first data processor operatively connected to said memory device for retrieving reminder messages from said memory device at the time selected for display of the reminder information and for processing the reminder message to generate a display signal for each retrieved reminder message, the display signal being capable to cause a message corresponding to the respective reminder message to be displayed on a display;

a second processor suitable for receiving an audio/video signal and for processing the received audio/video signal for presentation on a television display, and for receiving the display signal from said first data processor and for causing the message corresponding to a retrieved reminder message to be displayed on the television display so that it is superimposed on at least a portion of the audio/video signal presented on the television display, the reminder message being displayed on the television display at the time selected for display of the reminder information.

2. The apparatus of claim 1, wherein said memory device for storing reminder messages and said first data processor reside in said handheld device.

3. The apparatus of claim 1, wherein said memory device for storing reminder messages resides in a set top box.

4. The apparatus of claim 1, wherein the message corresponding to a retrieved reminder message is transmitted to and displayed on the television display as text in a closed caption message.

5. The apparatus of claim 1, wherein the handheld device comprises a keyboard for entering alpha/numeric data.

6. The apparatus of claim 1, further comprising means for allowing stored reminder messages to be displayed on a display for editing of the reminder messages.

7. The apparatus of claim 5, further comprising means for allowing stored reminder messages to be displayed on a display for editing of the reminder messages.

8. The apparatus of claim 7, wherein said handheld device further comprises a display, and means for allowing a user to view the alpha/numeric data as the user enters it with said keyboard.

9. The apparatus of claim 8, wherein stored reminder messages are capable of being displayed on said display of said handheld device for editing of the reminder messages.

10. The apparatus of claim 6, wherein stored reminder messages are capable of being displayed on the television display for editing of the reminder messages.

11. The apparatus of claim 1, wherein a reminder message comprising text and an image is capable of being stored in said memory device for storing reminder messages, and a reminder message comprising text and an image is capable of being retrieved and displayed on the television display.

12. An method for providing a reminder message to a display comprising:

- entering a reminder message on a handheld device, the reminder message comprising reminder information and a time that the reminder information is to be displayed to a user;
- wirelessly transmitting a signal corresponding to the reminder message;
- storing reminder messages in a memory device;
- receiving the transmitted signal corresponding to the reminder message;
- retrieving reminder messages from said memory device at the time selected for display of the reminder information;
- processing the reminder message to generate a display signal for each retrieved reminder message, the display signal being capable to cause a message corresponding to the respective reminder message to be displayed on a display;
- receiving an audio/video signal;
- processing the received audio/video signal for presentation on a television display;
- receiving the display signal;

causing the message corresponding to a retrieved reminder message to be displayed on the television display so that it is superimposed on at least a portion of the audio/video signal presented on the television display, the reminder message being displayed on the television display at the time selected for display of the reminder information.

13. The method of claim 12, wherein reminder messages are stored in a memory device in said handheld device.

14. The method of claim 12, wherein reminder messages are stored in a memory device in a set top box.

15. The method of claim 12, wherein the message corresponding to a retrieved reminder message is transmitted to and displayed on the television display as text in a closed caption message.

16. The method of claim 12, wherein stored reminder messages are capable of being displayed on a display for editing of the reminder messages.

17. The method of claim 12, wherein stored reminder messages are capable of being displayed on a display of the handheld device upon entry of the reminder messages.

18. The method of claim 12, wherein stored reminder messages are capable of being displayed for editing of the reminder messages on a display of the handheld device.

19. The method of claim 12, wherein stored reminder messages are capable of being displayed on the television display for editing of the reminder messages.

20. The method of claim 12, wherein a reminder message comprising text and an image is capable of being stored in said memory device for storing reminder messages, and a reminder message comprising text and an image is capable of being retrieved and displayed on the television display.
